

Screening for Appropriate Assessment of Ballyness Bay Aquaculture Licence Site T12/441B

ALAB Appeal Ref No. AP6/2025 (previously AP7/2020)

Appeal description:

Appeal against the decision of the Minister for Agriculture, Food and the Marine to grant with variation an Aquaculture licence in November 2019, for the cultivation of pacific oysters using bags & trestles at Aquaculture Licence site T12/441B in Ballyness Bay, County Donegal.

Step 1 - Description of the project, purpose of this document and local site characteristics

Brief description of the project

Anthony McCafferty applied for an aquaculture licence for a 2-hectare site in Ballyness Bay for the cultivation of clams on wooden trays and pacific oysters using bags and trestles on the 10 August 2011.

The minister decided to grant Anthony McCafferty a variation aquaculture licence for a 0.408 -hectare site (T12/441B) for the cultivation of pacific oysters using bags and trestles on 25 November 2019. To note the Marine Engineering Division's report of the 11 March 2019 described the site as being of poor quality but found no engineering reason to refuse or modify the site.

The proposed project involves installing low-profiles steel trestles (0.8 metres high) supporting mesh bags fixed by rubber straps or clips. Bags are turned and graded periodically and remain on site year-round for a period of 2 to 3 years.

The proposed access to the site is from Magheraroarty Pier and Ballyness Pier, using tractors and trailers.

The current draft aquaculture licence for Site T12/441B prepared by the Minister in November 2019 contains a number of conditions related to the use of tractors (or other vehicles) accessing, leaving and operating on site. In particular, that all vehicles must adhere to the strictly approved access and egress routes and that the licensees shall organise operations in consultation with other licensed operators to ensure that the total number of vehicles and harvesting machines on the foreshore on any one day is kept to the minimum necessary.

Brief description of the site characteristics

The proposed project is located in Ballyness Bay, which is situated in north-west Donegal adjacent to the towns of Gortahork and Falcarragh.

Ballyness Bay is a large and very shallow estuarine complex, with extensive areas of sandflats which are exposed at low tide. The Dooey Peninsula stretches across the mouth of this well-sheltered bay, leaving only a narrow strait to the open sea.

Site T12/441B is located in the southeastern side of Ballyness Bay in the low-water channel of the Gleanna River and within 50 meters of the High-water mark.

There are currently no licenced aquaculture sites in Ballyness Bay. Two previous aquaculture licenced sites were in operation in the 1990's, both for the cultivation of Pacific oysters using the bags and trestles, however the last of these licences lapsed in 1999.

The Bay is currently not a Designated Shellfish Area nor a Classified Bivalve Mollusc Production Area.

The proposed aquaculture licence site T12/441B is within the Ballyness Bay SAC and is 0.1 km from the Falcarragh to Meenlaragh SPA.

Purpose of this document

This report is the Screening for Appropriate Assessment for the proposed aquaculture licence site T12/441B and has been prepared in order to enable the Board to make a formal screening determination for the purposes of Regulation 42 of European Communities (Birds and Natural Habitats) Regulations 2011 as amended, and to confirm the European Sites which should be brought forward to a Stage 2 Appropriate Assessment, prior to carrying out a public consultation under the 2011 Regulations.

Step 2 - Identification of relevant Natura 2000 sites using Source-Pathway-Receptor Model and compilation of information on qualifying interests and conservation objectives.

The Qualifying Interests (QI's) highlighted in **bold text** are deemed to have a source-pathway-receptor link and as such the relevant European sites have been screened in. Distances are measured as straight-line distances in open water, or along-shore coastal distances, depending on the site and QI's being considered and are measured from the closest point of the proposed licence boundary that is the subject of this appeal. SPA Qualifying Interests are assessed based on behavioural characteristics and foraging range.

Table 1: List of protected sites and their Qualifying Interests

European Site Code	Distance from the Proposed Project (km)	List of Qualifying Interests	Site Specific Conservation Objectives (Maintain/Restore favourable conservation condition)	Connections (Source- Pathway-Receptor link)	Qualifying Interests considered further in Screening Y/N	European Site Screening in for stage 2 Appropriate Assessment
		Estuaries [1130] Embryonic shifting dunes [2110] Shifting dunes along the shoreline with Ammophila arenaria (white dunes) [2120] Humid dune slacks [2190] Vertigo geyeri (Geyer's Whorl Snail) [1013]	Maintain Maintain Maintain Maintain Maintain	No (no source-pathway- receptor link)	No (no source- pathway-receptor link)

² The Marine Institute's February 2019 report supporting Appropriate Assessment of Aquaculture in Ballyness Bay SAC concluded that in relation to interactions between aquaculture operations and seal use of the site [Ballyness Bay SAC], the risk of disturbance cannot be discounted and that based upon local observations it appears that seals are faithful to this one identified haul out location [identified sand bank in northwest of Bay]. The report further concluded that careful consideration should be given to licencing the site which shares the sandbank with the observed seal haul out. The DAFM Mitigation Summary subsequently states that "Proposed sites where there is proximity to seal sites will be reduced where possible or not licensed to maintain a buffer between the aquaculture sites and the seal areas." Licence decisions for affected sites were refused/granted with variations based on a 200m buffer zone around the identified seal haul out location.

----------	--	------	---

The following plans, related to the development of the maritime environment were also identified:

- The Climate Action Plan 2025
- River Basin Management Plans 2022-2027 (RBMP)
- Donegal County Development Plan 2024 2030
- National Biodiversity Action Plan 2023 2030

It cannot be excluded on the basis of objective scientific information that the proposed aquaculture project in combination with the above listed projects and plans, will have a significant effect on Ballyness Bay SAC, Gweedore Bay and Islands SAC, Horn Head and Rinclevan SAC, Cloghernagore Bog and Glenveagh National Park SAC, Inishbofin, Inishdooey and Inishbeg SPA, Derryveagh and Glendowan Mountains SPA, Horn Head to Fanad Head SPA, West Donegal SPA, West Donegal Islands SPA, Lough Swilly SPA, Roaninish SPA and Lough Foyle SPA particularly in relation to those projects which could potentially cause increased physical disturbance or habitat loss (such as other aquaculture licensed activities increasing the potential for habitat loss or increased organic material) and increased visual disturbance & above water noise disturbance.

Were mitigation measures considered during the screening process? No

Step 4 Screening Determination Statement

The assessment of significant effects:

On the basis of the information on file, and having regard to:

- The nature and scale of the proposed development
- The distance to the nearest European sites
- The potential for in-combination effects with other plans and projects
- Physical disturbance
- Physical disturbance and habitat loss
- Visual disturbance & above water noise disturbance

Having considered the legal framework applicable to Appropriate Assessment, it was concluded that the project the subject of the proposed Aquaculture Licence for the cultivation of pacific oysters on site T12/441B in Ballyness Bay, County Donegal will require Stage 2 Appropriate Assessment as it cannot be excluded on the basis of objective scientific information following screening that the proposed project, individually or in combination with other plans or projects, will have a significant effect on a European Site.

Conclusion				
	Tick as appropriate	Recommendation		
(i) The possibility of significant effects on a European site can be excluded				
(ii) The possibility of significant effects on a European site cannot be excluded	✓	Proceed to Stage 2 Appropriate Assessment		
Senior Technical Advisor Signature and Date
